LIQUID DENSE FERTILIZER FOR ORGANIC FARMING CONDENSED EXTRACT

EXTRA D&S is a Liquid Ecological Product strictly adapted at the 2092/91 & 834/2007 Regulation of European Community for fertilizers used at Organic Farming and the rest Directives. **EXTRA D&S** produces through a processing of black peat which have been transformed to humus and standardized by the **GT NATURA MLSO** method. This method offers the unique advantage of producing a highly condensed product, that has all the nutrient elements that the maternal product contains in 10 times higher concentration and only the 1/10 of the weight of the maternal material.

By this method:

- ❶ The physical, chemical and biological elements of the raw material are controlled and their humus grade -after the humus make procedure- is able to be determined.
 - ❷ The humus make procedure is based on the Controlled Biological Fermentation method.
 - ❸ After its stabilization, the product undergoes a special extraction method.
 - ❹ The extract undergoes a high technology condensation procedure on purpose to be condensed in the highest possible grade.
- ➔ The final product, **EXTRA D&S**, is totally controlled and completely stabilized, as far as the mechanical, chemical or biological aspect concerns.
- ➔ The **EXTRA D&S** product is completely homogenous, disinfected, free of any kind of pathogenic and any other negative physical and biological factors, free of bad odors, secure and friendly to the environment and the user.

APPLICATION

- Apply **EXTRA D&S** through the irrigation system, through the drips or by spraying.
